

The Art and Science of Crafting the Perfect Pre-Roll

Imagine getting paid to smoke pre-rolls while contributing to innovative cannabis research. It sounds like a dream, but Custom Cones USA and DaySavers are making it a reality with their study, The Science of Smokeability.

Revolutionary Collaboration

In collaboration with the Cannabis Research Coalition (CRC) and the Network of Applied Pharmacognosy (NAP), this study aims to revolutionize our understanding of cannabis smokeability, connecting cultivation methods to the ultimate smoking experience. Discover how this initiative will transform cannabis science and how you can be a part of it.

Leading Cannabis Research

The goal of The Science of Smokeability study is straightforward and ambitious: to pay participants to smoke pre-rolls for scientific research. Over the next two years, a series of scientific experiments will analyze cultivation and processing techniques to identify the variables that produce the most enjoyable and least harmful smoking experience.

Optimized Growing Methods

Picture a perfectly rolled pre-roll that burns evenly, thanks to scientifically optimized growing methods. This could soon be a reality. The study aims to revolutionize the cannabis industry by directly linking cultivation and manufacturing practices to consumer experiences, providing unprecedented insights into the science of smokeability.

Bridging the Knowledge Gap

Traditionally, cannabis cultivation has focused on maximizing yield and cannabinoid content. However, no comprehensive study has evaluated how these practices or post-harvest processing affect the smokeability of the final product. This study aims to fill that gap, providing actionable insights to improve product quality, consistency, sustainability, and profitability.

Key Variables Under Study

The study will assess variables such as mineral content, flushing, potential carcinogens, and moisture content for their impact on ash color, smoke composition, and smoke quality. By understanding these factors, researchers hope to identify the optimal conditions for the best smoking experience.

The Science of Smokeability study is a groundbreaking effort to enhance our understanding of cannabis products. By participating in this research, individuals can contribute to scientific advancements while enjoying premium pre-rolls. This initiative promises significant improvements for the cannabis industry, benefiting both producers and consumers.
